

Ω-ASM / Assemblage

Modular body-formation SoC

IP-4941 · Integrated reference · SoC architecture + source

Function and architecture

- authenticated docking
- power negotiation
- capability merge
- topology change

Integration summary

Integration scope, interfaces and qualification are agreed for the selected release.

Technical record

Canonical identity	IP-4941
Responsibility	Modular body-formation SoC
Delivery boundary	SoC architecture + source
Evidence scope	Integrated reference

Delivery and release binding

- Constituent release manifest
- Topology and physical integration assumptions
- System software and orchestration boundaries
- Qualification scope and system-level acceptance

Confirm for the selected release: Environment and dependencies, Version / build hash, API compatibility, License and support scope.

Evidence and qualification

The V29 estate records a structurally closed 17-SoC hierarchy and native software/reference-model evidence.

V29 inherited structural RTL and model evidence do not constitute a fresh foundry physical-signoff or fabricated-product result.

Source basis: Bible v7.42 §142, IP-4941

Evaluation and licensing

Evaluation: System architecture evaluation. Production: Platform integration program. Custom work: Customer-specific system composition. Rights, pricing, support and acceptance criteria are agreed for the exact scope.
